Legend
AI step
Rule or code
Human checkpoint
Reviewer uploads proposals and selects category
Valid format?
No
Yes
Ask for PDF, user retries
Malware scan and hash dedupe
Threat found
Clean
Reject file, inform user, stop for that file
Load criteria snapshot for category, version N, from admin config
Extract text with OCR, keep page references
Text readable?
No
Yes
For each uploaded proposal
Injection screen: pattern rules plus AI classifier
Hit
Clean
Quarantine quote, status flagged: attempt to influence reviewer
AI extraction of facts only: licence holder, WSIB, insurance, installs, price, weeks, warranty years, team items. Each with quote and page, null if absent
Verify quotes exist in source text and re-parse numbers. Mismatch becomes null plus flag
Mandatory gates: licence held by the bidder, WSIB, SM insurance
Clear fail
Missing or unclear
Pass
Status ineligible with reason
Status flagged with reason
Add to eligible pool
Scoring across the whole eligible pool
Experience: weight x min(installs, cap) / cap. Cap is an admin parameter. Missing = 0 plus flag
Price: weight x lowest eligible price / bid price. Missing = 0 plus flag
Timeline: weight x shortest eligible weeks / bid weeks. Missing or over max weeks = 0 plus flag
Warranty: weight/2 x min(panel, 25)/25 + weight/2 x min(workmanship, 12)/12
Team and approach: weight x matched items / items set by admin
Sum weighted points, rank by score, tie-break lower price then proposal ID
AI writes one-line reason from computed numbers. Cannot change scores or rank
Status flagged: unreadable file
Build JSON array: proposal, rank, status, score, reason
Reviewer checks evidence quotes, resolves flags, can override with mandatory reason
Human makes final award decision
Deliver final ranking JSON
Audit log: file hashes, criteria version, model and prompt versions, raw AI output, flags, overrides, decision
