Legend
AI step
Rule or code
Human checkpoint
Storage
Reviewer uploads one or more proposals into an open review round for a category
Valid format?
No
Yes
Ask for PDF, user retries
Malware scan and hash dedupe, also against files already in the round
Threat found
Reject file, inform user, stop for that file
Clean
Load criteria snapshot for category, version N; criteria, project size, budget ceiling, max weeks
Verified result already stored? Key = file hash + schema + prompt + model version
No
Extract text with OCR, keep page references
Text readable?
Yes
Yes
Add more files
Stage 1: for each uploaded proposal
Injection screen: pattern rules plus AI classifier
Clean
AI extraction of facts only: licence holder, WSIB, insurance, installs, price, weeks, warranty years, team items. Each with quote and page, null if absent
Verify quotes exist in source text and re-parse numbers. Mismatch becomes null plus flag
Store raw AI output, verified facts, quotes and injection findings with the cache key
Hit
Load stored facts, quotes and injection findings
No
Stored injection finding?
Yes
No
Quarantine quote, status flagged: attempt to influence reviewer
Mandatory gates: licence held by the bidder, WSIB, OH insurance
Pass
Requirements check: price within budget ceiling, completion weeks within max weeks
Missing or unclear
Clear fail
Price or weeks not stated
Over a limit
Within limits
Status flagged: unreadable file
Status flagged: requirement cannot be confirmed
Status ineligible with reason
Status flagged with reason
Status ineligible with reason
Mark eligible in the round
Round screen: each proposal shows status, gate result and extracted facts. No rank yet
Reviewer clicks Rank, at any time, as often as needed
At least 2 eligible proposals in the round?
No
Yes
No rank assigned. Message: add at least one more eligible proposal to compare
Stage 2: scoring across the eligible pool, recomputed on every ranking run from stored facts
Experience: weight x min(installs, cap) / cap. Cap is an admin parameter. Missing = 0 plus flag
Price: weight x lowest eligible price / bid price. Missing = 0 plus flag
Timeline: weight x shortest eligible weeks / bid weeks, Missing or over max weeks = 0 plus flag
Warranty: weight/2 x min(panel, 25)/25 + weight/2 x min(workmanship, 12)/12
Team and approach: weight x matched items / items set by admin
Sum weighted points, rank by score, tie-break lower price then proposal ID
Save ranking run: round id, proposal IDs included, criteria version, scores, timestamp
Flag cleared or file added
AI writes one-line reason from computed numbers. Cannot change scores or rank
Build JSON array: ranked proposals plus flagged and ineligible proposals from the round
Reviewer checks evidence quotes, resolves flags, can override with mandatory reason. Cleared flags join the pool and trigger a new ranking run
Human makes final award decision, round is locked
Deliver final ranking JSON
Database: rounds, proposals, extractions, ranking runs, overrides
Audit log: file hashes, criteria version, model and prompt versions, raw AI output, flags, overrides, ranking runs, decision
